

ABSTRACT OF THE DISCLOSURE

An image sensing apparatus such as digital still camera
and video camera having a driving device moving an image sensing
5 optical system to image sensing and non image sensing regions;
and a determination device determining whether the image
sensing apparatus is set at least in an image sensing mode, or
in an external control mode in which the apparatus is controlled
by an external controller unit. The determination device
10 determines an operation of the driving device in accordance with
a determination result of the determination device.
